Bosch Common Rail For Passenger

High-pressure rails made by Bosch are available for pressure levels between 1,400 bar and 2,700 bar. They are used for all on-highway applications in cars up to heavy duty vehicles and for all off-highway applications.

High-pressure rail for common-rail systems

The common-rail system with piezo injectors by Bosch enables the flexible injection of fuel at pressures up to 2,700 bar. Even greater economy and precision The “Digital Rate Shaping” strategy (DRS) contributes to a very small delay between pre-injection and main injection.

Common-rail system with piezo injectors

Bosch Common Rail System is modular in design. The right combination of high-pressure pump, injectors, rail and electronic control unit results in systems for all types of engine. Bosch Worldwide

Common Rail Systems, Bosch Common Rail Systems

As a result the requirements led Bosch to develop different injection systems serving all the new engine concepts. Therefore the start of passenger car Common Rail fuel injection technology is time wise strongly linked to the development of unit pump systems and different types of distributor pumps with a radial and axial plunger concepts.

Bosch common rail for passenger car/light duty - The first ...

The Bosch EPS 815 equipped with the CRI/CRIN SST package and allows us to test all passenger car (CRI) and commercial (CRIN) common rail injectors manufactured by Bosch. The test specifications in the test bench were derived directly from the equipment that is used on the assembly line at the Bosch factory.

The common rail system is a major advancement in diesel technology. Bosch launched its common rail system for passenger car diesel engines in 1997, which provides diesel engines with quieter performance, improved fuel economy, higher torque, and lower emissions. Each individual engine cylinder houses a common rail injector.

A Bosch Guide to - Mountain Truck

The CP4 handles pressure levels from 1,800 to 2,700 bar and is used for both on- and off-highway applications from passenger cars, light and medium duty vehicles up to small heavy duty vehicles. The variants tailor-made for each segment differentiate themselves with regard to, for example, lifetime, robustness, and maximum flow rate.

High-pressure pump CP4/CP4N - Bosch Mobility Solutions

The high-pressure pump applies system pressure to the fuel, which the fuel rail then delivers to the injectors. The pressure in the fuel rail is adjusted as necessary by a high-pressure pump. A high-pressure sensor on the rail measures the fuel pressure as a control variable.
