### Troubleshooting small engine problems | Briggs & Stratton

A simple, often overlooked, trigger for an engine stall occurs when the heated gases inside the fuel tank can't vent properly. The pressure causes the gas flow to reverse and move out of the carburetor, effectively shutting the engine down. Often referred to as vapor lock, the engine can't operate with these heated gases trapped inside the tank.

### Why Does my Lawn Mower Engine Stall When it Gets Hot? | Hunker
