Understand the features and capabilities of Release Management. Use Release Management to create and manage releases.

## **Build and Release Management Using TFS 2017 Training ...**

The point is to clearly separate responsibilities (especially for build and release): build compiles source code, runs tests and performs static code analysis and so on. It shouldn't have to know anything about environments – the output of the build is a single package with “holes” for environment values (tokens).

Team Foundation Server 2015 and Visual Studio Team Services offer a completely redeveloped build system, and Microsoft is in the process of rolling out a new system for Release Management. This 2-day course focuses on building and releasing .NET applications using these new systems.

## **Build and Release Management Using TFS 2015 Training ...**

Process of software building. Release management is the process of managing, planning, scheduling and controlling a software build through different stages and environments; including testing and deploying software releases.

## **Release management - Wikipedia**

The release management process is the key process used to release and deploy services into a live environment where customers can use the service. Proper planning of the release management process and extensive checking and testing is critical to ensure that there are no bugs or other problems when the service is released.

## **Release Management Process in ITIL: Do You Know All 6 ...**

How do I use a release pipeline? You start using Azure Pipelines releases by authoring a release pipeline for your application. To author a release pipeline, you must specify the artifacts that make up the application and the release pipeline. An artifact is a deployable component of your application. It is typically produced through a Continuous Integration or a build pipeline.

## **Release pipelines - Azure Pipelines | Microsoft Docs**

We then deep dive into Release Management and how you can release your applications to your on-premises infrastructure. The final two modules of the course examine how to run automated functional tests as part of your pipeline and how you can visualize the build and release status using dashboards.
