Bullhead rail was originally designed with reuse in mind. It was intended that it would be turned over when the top had worn but this proved impossible because the underside also wore where it had been secured to the sleeper. Bullhead rail has to be mounted in a special "chair" made of cast iron and secured by a "key" wedged between

Railway Technical Website

However, in Britain, bullhead rail-and-chairs remained in use until the middle of the twentieth century. They are now largely obsolete but can still be found on the London Underground and some sidings .
