Business Information Systems: Technology, Development and ...

The technology systems of the past competed on functionality. They were designed to do one or two things very well, and the organization adapted to focus on those one or two activities. When the enterprise needed to change its focus, the structures and processes of the system held it back. Today's more modular systems can be much more flexible.

10 principles for modernizing your company's technology

In most organisations Business Information Systems (BIS) make extensive use of information technology, such as personal computers. The reasons why computerised BIS have become widespread are evident in their advantages such as speed, accuracy and dependability.

Business Information Systems

An organization's information system is the information and communication technology (ICT) that an organization uses, and also the way in which people interact with this technology in support of business processes. Some authors make a clear distinction between information systems, computer systems, and business processes.
