Carburetor tuning is a science - one that takes years to master. There are ways to fine tune a particular section of the power-band as well as some less-critical components, like the air jet (a part of the high speed circuit which enriches the mixture as the RPMs increase), that aren't covered here.

### **Carburetor Technical Support - Holley**

A needle screw on each side of the primary metering block adjusts idle mixture. This is called a two-corner idle. Some carbs may have idle screws on the secondary metering block as well; this is known as a four-corner idle system. On "non-emissions" carbs, turn the screw clockwise to lean the mixture and counterclockwise to richen the mixture.
