CPR The position of the heart in the torso between the vertebrae and sternum (see Figure 1 for the position of the heart within the thorax) allows for individuals to apply an emergency technique known as cardiopulmonary resuscitation (CPR) if the heart of a patient should stop. By applying pressure with the flat portion of one hand on the sternum in the area between the line at T4 and T9 ...

19.1 Heart Anatomy - Anatomy and Physiology

We've all heard the heart described as our emotional center, but the heart is literally the center of the cardiovascular system. The heart is a pump that pushes blood through miles of blood vessels. The blood pressure generated by each heartbeat ensures that nutrients and oxygen reach every cell, directly or indirectly.
