Circulatory and Respiratory Systems

PC\|MAC

PC\|MAC

The heart receives oxygen-deficient blood (see the white arrows) from the body into the right upper atrium. When the heart contracts, the right lower ventricle will pump the blood into the lungs, where the carbon dioxide is exchanged for oxygen.

The Circulatory System: Multiple-Choice Questions

The circulatory system is a complex network of vital units of the body, such as blood, blood vessels, and the heart, which allows blood to circulate nutrients, oxygen, carbon dioxide, etc. to and from the cells so that the body can properly function. Let's start this quiz; it will give you the different functions of the human circulatory system. Find out now how much do you know about it!

The Ultimate Quiz On Circulatory System In Human Body ...

How does the fetal circulatory system work? During pregnancy, the unborn baby (fetus) depends on its mother for nourishment and oxygen. Since the fetus doesn't breathe air, his or her blood circulates differently than it does after birth: The placenta is the organ that develops and implants in the mother's womb (uterus) during pregnancy.

Blood Circulation in the Fetus and Newborn

II. Review of respiratory changes and other changes at birth. Overview ... As soon as the baby is born, the foramen ovale, ductus arteriosus ductus venosus and umbilical vessels are no longer needed. ... The sphincter in the ductus venosus constricts, so that all blood entering the liver passes through the hepatic sinusoids.

CIRCULATORY CHANGES AT BIRTH - Department of Molecular ...
