The Science of Love and Attachment | Psychology Today

All of your senses are involved in attraction more than you might think. Three of the most prominent and responsible ones are sight, smell, and hearing. Obviously, looks play a huge role in attraction. Although the definition of beauty varies among cultures, there are some characteristics that scientifically, everyone is more or less drawn to.

The Interesting Science Behind Physical Attraction

When we're crushing hard, our bodies start releasing dopamine like there's no tomorrow. It suffuses through the whole body, which is why you might feel like you can't get enough of the person you're attracted to.

The Science of Attraction: Smell, Voice, & Looks

Although there's no clinical definition for a crush, there are characteristics that differentiate a crush from a more serious romantic engagement, New York City-based therapist Dr. Bukky Kolawole told INSIDER. Mainly, crushes are rooted in fantasy and the person who is crushing tends to project their values onto the person they desire.

This is why you develop crushes - Insider

If we get rid of social niceties and get down to the science, attraction happens in the first 30 seconds. And, as much as we don't like to admit it, our brain decides almost instantly whether we are attracted to someone else. Research shows we know whether we want to "sleep with" someone in the first thirty seconds of meeting them.

How to Be More Attractive: 7 Rules to Increase Attraction

The researchers looked at over 50 different empirical studies that focused on attraction and non-verbal behaviors, also taking into account variations between different cultures around the world.

These Are The Signs That Someone Is Attracted To You ...

Physical attraction marks the beginning of most relationships. Men and women both feel attracted to a person of the opposite sex, they know each other, date, fall in love, and thus form a relationship. Without that initial spark of attraction, no relationship can ever get formed.
