6 Div, grad curl and all that 6.1 Fundamental theorems for gradient, divergence, and curl Figure 1: Fundamental theorem of calculus relates $df=dx$ over $[a,b]$ and $f(a); f(b)$. You will recall the fundamental theorem of calculus says $\int_a^b df(x) dx = f(b)-f(a)$; (1) in other words it's a connection between the rate of change of the function over

text (pamphlet) "Div, grad, curl and all that", by H. M. Schey. This 150 page easy-to-read book is one of my personal favorite math texts. It is easy to read, affordable (\$35), and should be in everyone's library. Preliminaries Before we dig into the details, we need to set up a few preliminary ideas and conventions. The first is

Div, Grad, and Curl

The divergence of the curl of any vector field A is always zero: $\nabla \cdot (\nabla \times \mathbf{A}) = 0$ This is a special case of the vanishing of the square of the exterior derivative in the De Rham chain complex. Divergence of gradient is Laplacian

Div Grad Curl and All that. I'm trying to self study vector calculus from the aforementioned book but I keep running into a problem. I'm a student who does problems one by one and then look at the answers to see where I went wrong. However, I can't find any solution to the questions in the book. Does anyone know where I can find it?
