Electric bus adoption in public transport urban fleet is growing all over the world.It started in China, and it has taken a few years for other regions to start the transition. But now Europe is booming: the year 2019 will be remembered as the year when the electric bus sales volumes definitive ramp up.While in 2018 the European electric bus market increased of 48 per cent compared to 2017 ...

Electric bus, main fleets and projects around the world

All those EVs add electricity demand, but not as much as you might think. By 2040 passenger EVs consume 1,290TWh, commercial EVs consume 389TWh, e-buses consume 216TWh and electric two-wheelers consume 69TWh. Combined, these add just 5.2% to global electricity demand. In many advanced economies, EVs prevent overall electricity demand from falling.

BNEF EVO Report 2020 | BloombergNEF | Bloomberg Finance LP

Electric buses have become more efficient than ever with the Proterra ZX5, the next evolution in zero-emission transit. The Proterra ZX5 is refined based on a decade of delivering the Catalyst registered — the most popular electric bus in North America. Since 2004, the EV industry has evolved toward full fleet electrification, and Proterra buses have evolved with it.

ZX5 Electric Bus | Proterra

In 2019 the European electric bus market set a new record tripling the figures of 2018.Nearly 12 per cent of city buses registered in 2019 were battery-electric. But things are going to get even deeper, very soon: Interact Analysis forecasts that “approximately 40% of new city buses registered in Europe in 2025 will be battery-electric“. The insight is included in several reports on ...
