Like electricity, magnetism produces attraction and repulsion between objects. While electricity is based on positive and negative charges, there are no known magnetic monopoles. Any magnetic particle or object has a "north" and "south" pole, with the directions based on the orientation of the Earth's magnetic field.

The Relationship Between Electricity and Magnetism

The major difference between electricity and magnetism is the presence of magnetism. Electricity can be present in a static charge, while magnetism's presence is only felt when there are moving charges as a result of electricity. In simple words, electricity can exist without magnetism, but magnetism cannot exist without electricity.
