Understanding and recognising failure mechanisms in concrete is a fundamental pre-requisite to determining the type of repair, or whether a repair is feasible. This title provides a review of concrete deterioration and damage, as well as looking at the problem of defects in concrete. It also discusses condition assessment and repair techniques.

Failure, Distress and Repair of Concrete Structures | the ...

These flaws can be caused by settlement or other failure in the lower pavement layers or by poor construction techniques. Upheaval. Upheaval is a localized upward movement in a pavement due to swelling of the subgrade. Frost heave is an example of this type of distress. Patch Failures. When pavements are patched, some distress may begin to occur.

has lost its rock. This type of distress often shows as a shiny, glass-like reflective surface. It is inherent to unstable mixes and often results in other roadway surface distresses if not corrected. Removal and replacement of flushed or bleeding pavement areas is an expensive, but sometimes cost-effective method of repair.
