Gravity can be used for direct detection of heavy minerals such as chromite . Magnetic method: Magnetic method deals with variations in the magnetic field of the earth which are related to changes of structures or magnetic susceptibility in certain near surface rocks.

### Geophysical Methods, Exploration Geophysics » Geology Science

When compared to the seismic reflection method which responds best to a horizontally layered earth, the gravity and magnetic methods respond best to vertical interfaces generating lateral density and magnetisation changes, for example, across a bounding fault separating basement (high density and magnetisation) from sediment (low density and magnetisation).

### Gravity Survey - an overview | ScienceDirect Topics

•Geophysical exploration techniques that employ both gravity and magnetics are passive. By this, we simply mean that when using these two methods we measure a naturally occurring field of the earth: either the earth's gravitational or magnetic fields. Collectively, the gravity and magnetics methods are often referred to as

### Geophysical Surveying Using Magnetics Methods Introduction

S.S. Hubbard, N. Linde, in Treatise on Water Science, 2011. 2.15.2.9 Magnetics. Magnetic methods obtain information related to the direction, gradient, or intensity of the Earth's magnetic field. The intensity of the magnetic field at the Earth's surface is a function of the location of the observation point in the primary earth magnetic field as well as from contributions from local or ...
