Read Book Heart Dissection Lab Guide

The dissection of the heart occurs in two phases. Phase 1 involves the examination of the external features and the identification of the four main vessels that can be viewed without cutting the heart open. Phase 2 involves the cutting of the heart so that the internal chambers and valves can be viewed.

Heart Anatomy - Virtual Dissection

Using words, trace blood flow through the major blood vessels and heart, starting with de-oxygenated blood returned from the body. Right Atrium → Right Ventricle → Left Atrium → Left Ventricle. Name the chambers of the heart in the order in which blood flows through them. Apex.
