### Hydraulic Service Jack Fors Analysis

A hydraulic jack is a device used to lift heavy loads. The device itself is light, compact and portable, but is capable of exerting great force. The device pushes liquid against a piston; pressure is built in the jack's container. The jack is based on Pascal's law that the pressure of a liquid in a container is the same at all points.

From what I have read, forty years of service is a reasonable time for a hydraulic jack to operate before it needs a rebuild. A word of caution: Rebuilding this jack presented several challenges that seemed almost insurmountable at the occurrence of each. Rebuilding this jack was much more difficult than simply replacing a few "O" rings, and it required more than the very few hours some say are required for rebuilding a jack.

It won't. The only thing replacing hydraulic oil at specified intervals will ensure is that money is wasted – either by changing the oil unnecessarily or, worse, keeping bad oil in service until the predetermined interval is reached. The only way to know when to change your hydraulic oil is by fluid sampling and analysis.
