Liboff presents a steeper learning curve because it starts with the formalities of quantum mechanics, which is not quite easily understood at the beginning. I recommend using Griffiths as a first textbook, and use Liboff in a second course on quantum mechanics.

In particular, I like Liboff's discussion on good/bad quantum numbers and the matrix representation of quantum mechanics. The corresponding discussion in Griffiths is really lacking. My main complaint regarding Liboff is that some sections seem to be out of context, in particular the last few sections in chapter 7, 8 and 11.
