**LAW AND DEVELOPMENT**  
A scientific theory of law represents a hypothesis (or group of related hypotheses) which has been confirmed through repeated testing, almost always conducted over a span of many years. Generally, a theory is an explanation for a set of related phenomena, like the theory of evolution or the big bang theory .

**Hypothesis, Model, Theory, and Law - ThoughtCo**  
Law and development is an interdisciplinary study of law and economic and social development. It examines the relation between law and development and analyzes how to use law as an instrument to promote economic and social development.

**Law and development - Wikipedia**  
Science and law Points of contact The points of contact between science and the law are numerous. The evolution of scientific theory, research and development might in the first place, affect the substance of the law, inasmuch as there would arise the need for dealing with so many spheres of nature and the human mind which have been explored by

**Law and Science - web.mit.edu**  
A scientific law generalizes a body of observations. At the time it's made, no exceptions have been found to a law. Scientific laws explain things but they do not describe them. One way to tell a law and a theory apart is to ask if the description gives you the means to explain "why."

**Scientific Hypothesis, Theory, Law Definitions**  
Most development theory equates development with national economic growth and sees the state as its primary agent; consequently, one of its central concerns is to understand and explain the role of the state in development and the nature of government-market relations.

The science policy of the United States is the responsibility of many organizations throughout the federal government.Much of the large-scale policy is made through the legislative budget process of enacting the yearly federal budget, although there are other legislative issues that directly involve science, such as energy policy, climate change, and stem cell research.

**Science policy of the United States - Wikipedia**  
A good scientific law is a finely-tuned machine, accomplishing its task brilliantly but ignorant of why it works as well as it does. A good scientific theory is a bruised, but unbowed, fighter who risks defeat if unable to overpower or adapt to the next challenger. Though different, science needs both laws and theories to understand the whole ...
