The mechanistic interpretation of network localization remains unclear. One possibility is that clinical symptoms in neurological diseases can result from dysfunction in a connected but undamaged brain region through a mechanism termed diaschisis (Carrera and Tononi, 2014). Alternatively, network localization may suggest that a complex symptom ...

The original description of stroke syndromes followed the phenomenologic approach to clinical diagnosis that characterized classical neurology; accurate diagnostic localization of injuries or lesions of the nervous system required clinicians to piece together the different deficits into well-defined, recognizable, and predictable syndromes based on pattern recognition. Stroke syndromes had the singular advantage of directly relating to specific vessels and their branches.
