Named entity recognition has many different applications, either as a standalone tool or as a necessary step for more complex NLP tasks, such as question answering, text summarization, or machine translation. In business, entity extraction can be used to improve many routine processes. Here are some interesting use cases:

Named Entity Recognition: Concept, Guide and Tools

Getting the translation of named entities right is not a trivial task and Machine Translation (MT) has traditionally struggled with it. If a named entity is wrongly translated, the human eye will quickly spot it, and more often than not, those mistranslations will make people burst into laughter as machines can, seemingly, be very creative.To a certain extent, named entities could be treated ...

Named-entity recognition is a subtask of information extraction that seeks to locate and classify named entities mentioned in unstructured text into pre-defined categories such as person names, organizations, locations, medical codes, time expressions, quantities, monetary values, percentages, etc. Most research on NER/NEE systems has been structured as taking an unannotated block of text, such as this one: Jim bought 300 shares of Acme Corp. in 2006. And producing an annotated block of text tha
