Nursing Diagnosis Bymoyet - logisticsweek.com

What is a nursing diagnosis? A nursing diagnosis is a clinical judgment concerning human response to health conditions/life processes, or a vulnerability for that response, by an individual, family, group, or community. A nursing diagnosis provides the basis for the selection of nursing interventions to achieve outcomes for which the nurse has accountability.

Hyperthermia: Body temperature elevated above normal range. Hyperthermia is elevated body temperature due to a break in thermoregulation that arises when a body produces or absorbs more heat than it dissipates. It is a sustained core temperature beyond the normal variance, usually greater than 39° C (102.2° F).

NANDA Nursing Diagnosis List For 2015-2017 - Health Conditions

Nursing diagnosis does not result from medical diagnosis, period. This is one of the most difficult concepts for some nursing students to incorporate into their understanding of what nursing is, which is why I strive to think of multiple ways to say it. Yes, nursing is legally obligated to implement some aspects of the medical plan of care.

What is the history of nursing diagnosis? | Experts123

Definition of Nursing Diagnosis: Nursing diagnosis is the second step of the nursing process. It follows the assessment phase and consists of the Interpretation of assessment data and identification of the client's strengths and problems. A nursing diagnosis is composed of three components: diagnostic Label (Problem), etiology (Related Factors And Risk Factors), and the defining ...
