Shockwaves are byproducts of traffic congestion and queueing. They are transition zones between two traffic states that move through a traffic environment like, as their name states, a propagating wave. On the urban freeway, most drivers can identify them as a transition from a flowing, speedy state to a congested, standstill state.

In fact, correct capturing and detection of shock waves are important since shock waves have the following influences: (1) causing loss of total pressure, which may be a concern related to scramjet engine performance, (2) providing lift for wave-rider configuration, as the oblique shock wave at lower surface of the vehicle can produce high pressure to generate lift, (3) leading to wave drag of high-speed vehicle which is harmful to vehicle performance, (4) inducing severe pressure load and ...

Steel rail laying mainly include rail apolegamy and track laying. Rail apolegamy is a necessary process in the track laying. Measure the length of each rail and rail apolegamy can be based on it. It is suitable to use rails with same length deviation. What's more, length deviation is less than 3mm, and cumulative deviation is less than 15mm.
