the solute molecules. Osmosis is a passive process in which a solvent moves without the input of energy from the surrounding. Osmotic pressure is defined as the pressure required to maintain equilibrium, or no net movement of water. It is a colligative property because it depends on the concentration of solute, but not the identity of the solute.

Part 1 Molarity Why? When a solute is dissolved in a solvent, a solution is formed. A chemist often needs to know how much solute is present in a given volume of solution. In this activity, you will learn how to determine the amount of solute that is dissolved in a given quantity of solvent by calculating the concentration of a solution. Model 1 Imagine that you have two 1.0 liter volumetric ...
