Solution: Let $M_0 = \{F \subseteq E \mid F \text{ countable}\}$. As per the hint, we'll rst show that M_0 is a σ -algebra. Suppose $f \in \mathbb{N}^{\mathbb{N}}$. For each $n \in \mathbb{N}$ there is a countable subset $F_n \subseteq E$ such that $E \setminus F_n \in M_0$. Then $F = \bigcap_{k=1}^{\infty} F_k$ is a countable subset of E and for all $k \in \mathbb{N}$, $F \subseteq F_k$ implies $E \setminus F \supseteq E \setminus F_k \in M_0$, so $E \setminus F \in M_0$. Since M_0 is a σ -algebra, $E \setminus F \in M_0$. And since F is countable, $F \in M_0$.

From the very beginning, Folland develops the theory of Borel measures on the real line in generality (whereas Rudin's "construction" of Lebesgue measure based on the Riemann integral is, in my opinion, incomprehensible).
