By far, the largest fraction of Earth's water is found in the oceans. 2. About 20 percent of Earth's water is available as liquid freshwater. 3. The energy that drives evaporation, condensation, and precipitation of water comes from nuclear reactions within Earth's crust. 4. The average salinity of ocean water is about 35 g dissolved salts per kg

Study Guide for Content Mastery - OnCourse Systems

• Water taken from lakes, reservoirs, or rivers is considered surface water. • Surface water supplies about 75 percent of the water consumed by people in the United States. Even though a larger number of water systems in the United States use a groundwater source, on the average, they are smaller and serve fewer people. Surface water is a more likely source for large cities.
