The Means of Reproduction: Sex, Power, and the Future of ...

sexual reproduction The production of a new living thing by two parent organisms, with each parent contributing half the material in the DNA of the offspring. The young, genetically different from either parent, can rapidly adapt to their environment by means of natural selection. (See chromosomes and meiosis.)

Sexual reproduction | Definition of Sexual reproduction at ...

Sexual reproduction is the process in which new organisms are created, by combining the genetic information from two individuals of different sexes. The genetic information is carried on chromosomes within the nucleus of specialized sex cells called gametes. In males, these gametes are called sperm and in females the gametes are called eggs.

Sexual Reproduction - The Definitive Guide | Biology ...

References. Sexual reproduction is a mode of reproduction involving the fusion of haploid female gamete (egg cell) and haploid male gamete (sperm cell). The fusion of these gametes occurs at fertilization resulting in the formation of a diploid zygote. The zygote develops into an individual organism that is genetically distinct from the parent organisms.
